

4/MUD CRACKLE GLAZE

Aged oil based paints dry out in particular when exposed to direct sunlight. The appearance over time is an old aged crackle. Decorative artists can now achieve this effect by using ***Crackle One Stage***.

Mud Crackle Glaze is a flat transparent acrylic base glaze, which is applied on preferably sealed surface. When is completely dried any latex paint or oil-based paint is applied over the ***Mud Crackle Glaze*** and after the paint is cured and dried, the cracking effect will appear.

The pattern of cracks is controlled by type and thickness of paint and method of application.

Good uniform cracks can be achieved by using roller in one direction.
