

Antique & Stone Crackles

Construction & decorative · 2-stage crackle finish

Single-component water-based acrylic decorative crackle coating, with superior hardness, block and abrasion resistance. It cures clear, so it does not change colour when pigmented or tinted, and is compatible with water-based and universal pigment dispersions.

Product features

- Water-based, safe and easy to handle
- Outstanding washability and scrub resistance
- Good exterior properties
- Excellent hardness and abrasion resistance
- Non-flammable
- Excellent brightness and colour stability
- Excellent compatibility with universal pigment dispersions

Application

A two-coat system. After surface preparation, apply the AcroSize crackle size with brush or roller and let it tack up. Then apply the crackle topcoat: Stone Crackle with knife or trowel, Antique Crackle with roller or brush, and let it dry. Cracks appear during drying. Thicker coats give larger cracks. Low-viscosity topcoat gives small Antique cracks; high-viscosity gives larger Stone cracks. Suitable for interior and exterior use. Avoid large quantities of colourant, especially glycol-based types, which diminish the crackle effect.
