

Ledranol DW

Leather chemicals · Fatliquor & waterproofing

Fatliquoring and waterproofing agent for chrome or combination-tanned shoe-upper and garment leathers. Builds genuine water repellency when properly fixed.

Typical analysis

Appearance	Viscous emulsion
Charge	Anionic
Active matter	50%
pH (10% solution)	8 – 9

Shelf life

6 to 12 months when properly stored. Mix well before use; keep from freezing or overheating.

Application

Recommended at 8 – 14% for shoe upper and 12 – 16% for garment leathers, based on wet shaved weight. For best results, fix with mineral tanning agents. For good waterproofness, complete neutralization to a pH of 5.2 or greater is necessary. Avoid wetting agents and other emulsifiers, which reduce water repellency. A thorough final wash is highly beneficial.
